Mouse pointer position.
The position is given in the global physical coordinate system.

Name of the source currently active. Here, the view at angle 0° (and channel 0) is active, even if it is not displayed.

Overview of the dataset. Each source is represented as a block. Green blocks represent sources currently displayed. The gray rectangle respresents the window view.
Here we are in fused mode, with the views 235° and 325° displayed.

Log messages are shows here.
